

OMURBEK DZHAMALOV

📍 South Korea 📧 @Omurbek in omurbekdzhamalov ✉ omurbekdzhamalov@gmail.com

EDUCATION

Korea Advanced Institute of Science & Technology (KAIST)

South Korea

Bachelor of Science in Computer Science and Mathematics

Sep 2022 – June 2026

- Relevant Coursework: Machine Learning, Probability and Statistics, Mathematical Analysis, Number Theory, Linear Algebra, Data Structures, Algorithms, Databases, Deep Learning, Reinforcement Learning, System Programming.

EXPERIENCE

Yandex LLC

Russia

Data Analyst Intern — Yandex International B2B Geoanalytics

Jun 2025 – Present

- Prioritized 100 optimal power bank deployment locations in Moscow by building a data pipeline leveraging walking model logs and geospatial analysis, improving provider's strategic site selection and potential user accessibility.
- Optimized ATM deployment strategy for a foreign bank by developing a CatBoost classifier trained on geolocation and terminal features; achieved 80% accuracy through KFold validation and Optuna tuning, enabling data-driven decision making for ATM placements. [Python, SQL, Datalens, Kepler, Numpy, Pandas, Company's internal technologies]

Huawei Technologies

China

Technical Research Engineer Intern — Huawei Laboratories

Dec 2023 – Feb 2024

- Reduced peak memory consumption of a neural network by up to 8%, enabling more efficient model training and deployment on limited-resource hardware, by developing an approximate algorithm that optimizes the processing order of data dependencies represented as directed acyclic graphs (DAGs) in a computationally complex (NP-hard) problem space.
- Developed automated pipelines to evaluate algorithm performance across 40+ datasets, collecting metrics including execution time and memory usage, supporting targeted optimizations and scalability analysis. [C++, Python, Bash scripting, Company's internal technologies]

Yandex LLC

Russia

Software Engineer Intern — Yandex.Routing

Jul 2021 – Oct 2021

- Eliminated waiting times for logistics drivers caused by scheduled drawbridges and road repairs, improving operational efficiency of Yandex.Routing, a service processing over 100,000 queries per second.
- Adjusted Contraction Hierarchies and Bidirectional Dijkstra algorithms to incorporate temporal constraints for road-blocks, enabling sub-2-second routing on vast graphs with more than 100 million vertices and more than 300 million edges. [C++, Protocol Buffers, Arcadia CI, Company's internal technologies]

TimelySoft LLC

Kyrgyzstan

Software Engineer Intern — Olymp.Krsu Team

Aug 2020 – Nov 2020

- Enhanced the educational experience of high school students nationwide on National Olympiads by integrating support for Interactive-type problems in the Online Judge platform, enabling complex logical interactive games simulation.
- Ensured reliable synchronization between contestants' and jury's programs by implementing multithreading and I/O stream redirection using the Win32 API, increasing platform stability during competitions. [C++, Win32 API, Git]

PROJECTS

Kaggle: Cost Forecast for Special Equipment

- Improved price prediction accuracy by refining features with Random Forests and applying weighted leaf averaging on auto.drom.ru dataset, reducing mean absolute percentage error (MAPE) for forecasting special equipment costs.

BRFSS 2023 Health Disparities Analysis

- Identified key socioeconomic and lifestyle factors impacting public health disparities across demographic groups by conducting regression, correlation, and geospatial analyses on 2023 BRFSS data using Python, supporting data-driven public health insights.

AWARDS

31st International Olympiad in Informatics (IOI)

Azerbaijan

- Won Bronze Medal at 31st International Olympiad in Informatics, the most prestigious annual Competitive Programming competition for high school students worldwide.
